

Hazard Communication

Globally Harmonized System (GHS) Implementation

Around the globe, countries are adopting or revising their chemical classification systems to align with the Globally Harmonized System of Classification and Labeling of Chemicals (GHS). As a result of these changes, safety data sheets (SDSs) and labels will appear giving the same type of hazards and warnings. As countries adopt the GHS, SDS and product labels will more closely resemble the SDS and label formats currently being used in the United States, Canada, European Union, China, Brazil, Japan, Mexico, Taiwan, Korea, and other countries.

Elementis Product Stewardship, Sustainability, and Compliance group implements the GHS system as countries define their final programs. We provide the SDS and labels in multiple local languages in order for our customers to safely use and dispose of our products. Our goal is to insure that anyone handling our products can do so with full knowledge of the hazards and safe handling requirements regardless of country or language.
